TAKE A DEEPER LOOK

MBarC has vertically integrated its structural, renewable, and electrical divisions. With in-house engineering, installation, and O&M, we have effectively reduced multiple layers of communication and markup. We pride ourselves in efficient project management, coordination, and meeting deadlines. This efficiency in simplicity has been the key to success for small and large scale projects.

RECYCLING OUR NATURAL RESOURCES. SAVING MONEY.
PROVIDING FOR THE FUTURE.

M Bar C’s Renewable Energy division was created to meet the increasing demands for sustainable energy. From Solar PV to Advanced Energy Storage, we offer a variety of custom energy upgrades designed to meet your specific needs. MBaRC is now your one-stop-shop for everything under the sun.

HOW IT WORKS

Physical
The first step in determining the feasibility of your project is to consider the available space. Ideal locations are rooftops, parking areas, and open areas of flat land. Our engineers are trained to design within space constraints and make the best use of available real estate.

Usage
Before we design a system to fit your needs, we perform an in-depth analysis of your historical electricity consumption. Time of use, utility rates, and weather patterns are a few of the factors taken into consideration when determining financial savings.

Financing
We partner with long standing, experienced financing entities to help you finance your system. Whether you are a non-profit that cannot monetize tax credits or part of an LLC without a tax appetite, we have a solution for you. Third party financing is solely a service we facilitate. Ultimately, it is our goal to make sure our clients are taken care of and treated like part of the M Bar C family.
